Abstract of JP 9214368 (A)

PROBLEM TO BE SOLVED: To allow a teletext multiplex broadcast receiver to collect designated teletext data among broadcast teletext data.

SOLUTION: The entire shape is configured to be a card shape to be inserted to a card slot of other external equipment. The receiver is provided with a reception circuit 10 receiving a teletext multiplex broadcast and with a memory 24, and also with a circuit 20 that compares data of the received teletext broadcast program with a key word set by the user to detect whether or not the key word is included in the data of the teletext broadcast program, with the circuit 20 that stores data of the teletext broadcast program to the memory 24 when the data of the teletext broadcast program including the key word as the result of comparison, with interface means 51, 52 accessing data with an external equipment 100. The data stored in the memory 24 are fed to the external equipment 100 via the interface means 51, 52.
